

Marangoni's Blackline MIX202: high mileage in the most demanding on/off applications

The innovative non-directional RINGTREAD pattern is designed for use on the drive axle of vehicles operating in mixed applications, on and off the road.

Rovereto, Italy – Marangoni Retreading Systems is pleased to present the latest addition to its RINGTREAD “MIX” family, the product range created to meet the needs of users in the on/off segment. Blackline MIX202 is an innovative pattern designed for use on the drive axle of vehicles operating in mixed road/quarry applications requiring high mileage in very demanding surfaces.

This new pattern significantly improves the features of the designs of previous generation RINGTREADs like the MIX101 and the MIX100, having a tread depth of 22 mm and a Blackline compound ensuring a very high mileage. Furthermore, MIX202 is a non-directional profile, involving less risk of incorrect fitting and greater flexibility.

Blackline MIX202 is a drive design featuring a pattern with open shoulders and large transverse blocks, and a new and innovative ornamental sipe with a central hole on the shoulder's block ensuring a great look and a perfect cooling of the block during the service; this helps to minimise the heat generation, thus contributing to a longer casing and tread life.

The tread pattern ensures a proper transfer of forces due to the presence of the transverse tread blocks and the reinforcing bridges. This permits high resistance to impacts and to chafing against rocks/stones, allowing greater stability on soft ground (mud). Blackline MIX202 features good self-cleaning properties due to the pattern geometry and to the wide opening shoulders, lowering the risk of tearing.

Finally, this new tread pattern is a 3PMSF marked product, suitable for winter usage.

Blackline MIX202 is available for the retreading of 315/70R22.5 and 315/80R22.5 tyres.

Rovereto, 11/09/2019

NOTE TO EDITORS

Marangoni Retreading Systems is the division of the Marangoni Group focused on the development and global distribution of systems, materials and technologies for the cold retreading of commercial tyres.

Marangoni Retreading Systems offer an integrated system of products and services providing the tools and know-how needed to ensure efficient retreading processes, high-quality products, and world-class service and support to optimise commercial activity.
